cPanel

Welcome

c Pan

cPanel is the industry leader for turning standalone servers into a fully automated point-and-click hosting platform. Tedious tasks are replaced by web interfaces and API-based calls. cPanel is designed with multiple levels of administration including admin, reseller, end user, and email-based interfaces. These multiple levels provide security, ease of use, and flexibility for everyone from the server administrator to the email account user.

cPanel

cPanel/WHM for Linux

cPanel and WebHost Manager (WHM) combine to form a fully featured web hosting control panel system. The cPanel and WHM package allows you to manage every aspect of your server's web hosting needs through two easy-to-use interfaces. cPanel and WHM help your customers and your staff to manage your servers and the domains and accounts on them.

Buy Now

Enkompass for Windows

Enkompass offers a web hosting control panel system for Microsoft Windows® Server-based hosts. With central management of multiple servers across an Active Directory domain, Enkompass makes it easy to control and grow your hosting business.

Buy Now

Software Modules

cPanel DNS ONLY

cPanel DNS ONLY is software that allows you to run a dedicated physical nameserver, which you can then link to your web server(s) using WHM's DNS Clustering feature.

cPanel Game Server (cPGS)

cPGS is a software module that allows you to set up and run a game server.

Website Owner

Web hosting companies install cPanel software onto their servers to make their services easier to use. cPanel does not host any websites. We recommend contacting your web host for assistance.

Plugin/API Developer

Join the XML API mailing list to participate in discussions about integrating cPanel and WHM functions into custom applications.

Please submit a ticket if you encounter issues with our APIs or need further assistance customizing or automating cPanel software.

Authorized Partner

As an authorized Partner NOC/Distributor, you have direct access to 24x7 technical support via your account. Enter the IP address of your server below. This will begin the process of opening a ticket.

Enter your server's IP

NOC Server Administrator

Your cPanel licensing provider will provide the assistance you require. If you enter the IP address of your server, we can determine who your licensing provider is:

cPanel Plugins

cPanel Plugins are added interface links in the cPanel interface. Plugins allow hosts to add links to applications they have developed, or third party links, even those outside of the cPanel interface.

cPAddons

Another type of plugin is a cPAddon; an application packaged specifically for the cPanel platform. A server administrator can install the cPAddon, providing access for domain owners. Domain owners can then install cPAddons on their websites through the Site Software link in the cPanel interface.

Interfacing with cPanel

cPanel and WHM offer a variety of APIs for extending the functionality of our software. You can automate many common functions of both cPanel and WHM. You also have access to hooks, which let you integrate your own maintenance scripts with cPanel to perform specific tasks.

Documentation

View our documentation for technical details about using APIs, plugins, hooks, modules, cPAddons, and languages.
